Experimental determination of the saturated vapour pressure of some liquid aviation fuels and calculation

of their heat of vaporization

SOURCE:

Moscow. Aviatsionnyy institut. Trudy. no.132. 1961. 116-122. Teplofizicheskiye svoystva nekotorykh aviatsionnykh topliv v zhidkom i gazoobraznom

sostoyanii.

TEXT: A simple manometric apparatus was used with an adjustable limb of mercury to enable the vapour: liquid ratio to be kept constant. The system was tested with carbon tetrachloride and agreed to 2% with the tables of Kaye and Laby over the range 21 to 64°C. For gasoline and T-1, the vapour: liquid ratio was held at 4:1, and data obtained for the fuel and for the three cuts into which it was fractionated; the data cover 20 to 150°C (gasoline) and 20 to 230°C (T-1). For T-5, two ratios were used, 2:1 and 4:1, and data cover 20 to 270°C. Latent heats of vaporization were obtained from the Clausius-Clapeyron relation, Card 1/2

82 B TITLE: Method of obtaining liquid lubricant-coolant for rolling thin steel stripe. Class 23, No. 173369 SCURCE: Byulleten' isobreteniy i tovarnykh snakov, no. 15, 1965, 68 TOPIC TAGS: lubricant, coolent, liquid lubricant, rolling lubricant, cold rolling, strip rolling ABSTRACT: This Author Certificate introduces a method for the preparation of a liquid coolant-lubricant based on methylenebisamide of synthetic fatty acid used, for instance, in rolling thin transformer or stainless-steel strips. To obtain a stable lubricant which would make it possible to roll the strips to a required thickness, an alkylsulfonate, alkylarylsulfonate, or hydroxyethyl smine of fatty acid containing five Hydroxy radicals is added to the methylenebisamide of synthetic fatty acid. In a variant, the specified components are melted and then emulsified in water. Title

A Case of Isolated Lymphogramulomatosis of the Stomach.

Orig Pub

: Sov. meditsina, 1958, No 7, 136-137

Abstract

In a 57-year-old woman who suffered pains in the stomach region, vomiting, general weakness and who had tarry stool, a tumor with dimensions 8 x 6 cm in the middle part of the stomch was discovered roentgenologically. 2/3 of the stomach was resected. Under histologic examination of the tumor, mucous granulation tissue was discovered which consisted of polymorphic cells, eosinophiles and single binuclear cells. Isolated lymphogranulomatosis was diagnosed. 2 years after surgery, the patient

is clinically well.

*4908. Clinical and radiological evaluation of hysterography in cancer of
the uterus based on 615 examinations Kliniczna i radiologiczna ocena histerografii w raku mocicy na podstawie 615 badan. Tarlowska L., Wróbel M. and
Buraczewski J. Odd. Onkol. Ginckol. i Oddz. Rentgenodiagn., Inst. Onkol. im.
Marii Skłodowskiej-Curie, Warszawa Nowolwory 1959, 9/2 (105-116) Tables 5
Illus. 12

Hysterography has been in use at the Oncological Institute in Warsaw since 1958. It has been performed 615 times in 433 persons with uterine carcinoma. It is carried out: (1) in uterine carcinoma in order to select the method of treatment; (2) in cervical cancer if involvement of the uterine body is suspected; (3) when histological examination fails to give certainty as to whether the tumour originates from the cervix or body of the uterus; (4) in persons suspected of cancer of the uterine body. Lipiodol is being used which, though inferior to aqueous substances as regards the detection of details, is safer as far as penetration to the oviducts is concerned. In 24% of the hysterograms there were diagnostic difficulties. In 78% out of 148 cases of cancer of the uterine body the hysterographic results confirmed the diagnosis, the number of false negatives amounting to 7%; enlargement of the uterine cavity was found in 40% of cases. In 23% of women examined penetration of lipiodol into one or both oviducts took place. The most frequently encountered pictures were infiltration of the wall resulting in irregular or papillomatous shape (57%) or a tumour penetrating into the uterine cavity (40%). Analysis of the material did not confirm Norman's finding (Acta radiol., suppl. LXXIX) that there is any relationship between the microscopic structure of the carcinoma and its radiological picture. In cervical cancer the hysterographic picture confirmed the diagnosis of carcinoma in only 22% of cases. Complications consisted in a rise of temperature up to 38° C. (14 patients), peritoneal irritation (17), and acute pelvioperitonitis resulting in death (1). Only 3 patients exhibited signs of pneumonia due to the penetration of lipiodol into pulmonary vessels; symptomless perforation of the uterus occurred in 2 cases. Among 226 persons who had had hysterography performed at least 3 years ago, distant neoplastic metastases could be observed in 10%, to the lungs in 3%, the peritoneum being involved in only 0.9%. These figures do

On the Catalytic Influence of Metals on the Corrosive Activity of Motor Oil (O kataliticheskom vliyanii metallov

na korrozionnuyu agressivnost' motornykh masel)

Khimiya i Tekhnologiya Topliva i Masel, 1957, No. pp.43-49 (USSR) PERIODICAL:

The influence of metals and antifriction coatings on the corrosive activity of motor oils used in modern engines was inves-ABSTRACT: tigated. Differences in the corrosion sensitivity of lead, copper and indium towards oxidation products of oils was demonstrated. It was established that lead is more sensitive to corrosion by oil oxidation products than indium and copper. A relationship between the catalytic influence of copper on oxidation of oils and the corrosive attack of oils on lead and lead and indium containing antifriction bearing coatings was established. It was shown that anti-corrosive additives by forming on the surface of metals protective films neutralise the catalytic influence of metal on the oxidation of oil and thus protect the metal from corrosion by the oil oxidation products. There are 3 figures, 5 tables and 4 references, 3 of which are Russian and 1 English.

nykh prisadok)

PERIODICAL: Khimiya i Tekhnologiya Topliva i Masel, 1957, No.10, pp. 41-46 (USSR)

After a brief review of views expressed in the literature on the action of detergent additives on the operating proper-ABSTRACT: ties of oils, the results of an investigation of the influence of an additive TsIATIM-339 on changes in the chemical composition and operating properties of oils are given. The tests of oils were carried out on Diesel single-cylinder engines OKB and NT-9-3 as well as on a full-scale engine 9A3-204. Oil MC-20 from Groznenskoy crude and experimental samples of Diesel oil from Tuymazinskaya Devonian crude with and without the above additive were tested. By adsorption separation on silicagel the characteristics hydrocarbon group compositions of oils before and after tests were determined. The experimental results are given in Tables 1-4. Conclusions: alkylphenolic additives of the typeTSIATIM-339 belong to a group of chemically-active substances, reacting with products formed The washing action in oil during its operation in an engine. card 1/2

TITLE:

Alkyl phenol additives from formaldehyde condensation

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 6, 1962, 541-542, abstract 6M262 (Sb. "Prisadki k maslam i toplivam". M.,

Gostoptekhizdat, 1961, 20-26)

A description is given of the synthesis of the additives Vnii NP-370. Vnii NP-371, and Vnii NP-372, which are the oil concentrates (-50% in spindle oil No. 2) of the Ca, Ba, and Li salt, respectively, of the condensation product of alkyl phenol with CH20. The phenol is alkylated with polymer distillate in the presence of phenol sulfonic acid as a catalyst, which is previously prepared by treating phenol with H2SO4 (8% of the combined amount of phenol and polymer distillate). additive Vnii NP-371 (viscosity 17-80 centistokes/100°C) contains 7-9% of Ba. Prolonged treatment with Ba(OH)2.8H2O at 145°C doubles the Ba Card 1/2

Alkyl phenol additives from ...

content without significantly altering the viscosity. The additive Vnii NP-370 contains 2-2.5% of Ca, which increases to 3-3.5% if the additive is prepared by treating alkyl phenol simultaneously with CH20 (as a 37% aqueous solution) and CaO in the presence of a promoter. The effect of the alkyl phenol: CH20 ratio and of some other conditions on the quality of the additive Vnii NP-370 is also investigated. note: Complete translation.

TITLE: Preparative method for motor oils. Class 23, No. 179868

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 6, 1966, 57

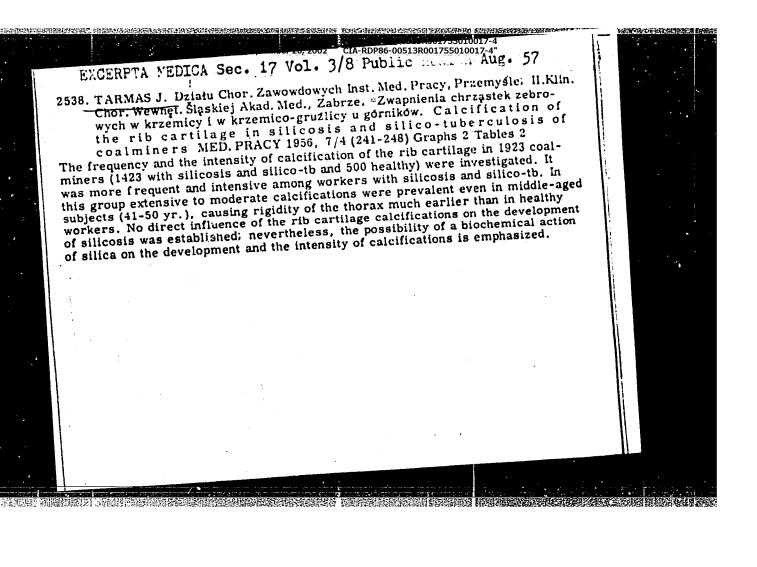

TOPIC TAGS: lubricating oil, lubricant additive

ABSTRACT: An Author Certificate has been issued for a preparative method for motor oils, involving the introduction of additives! To impart the required service properties, the additives used are an alkylphenol-formaldehyde condensation product (3—15%), a sulfonate additive (1—6%), an additive tassed on xanthates or dithiophosphates (0.5—1%), and an organosilicon additive (0.003—0.005%) [the additives are no further identified in the source].

Abstract:

The average duration of the tectonic stage (cycle) equals the period of rotation of the sun about the center of the gallaxy. When the sun intersects the galactic plane, the gavitational field of the gallaxy changes the shape of the earth, and this is the cause of tectogenesis. All the geotectonic hypotheses are correct and compatible, i.e., they express various aspects of the same process.

AUTHORS:

Vitman, D.V., Engineer and Tarmosin, A.M. Engineer.

TITLE:

Surfacing Forging Dies with Chrome-Molybdenum Alloy. (Naplavka

shtampov khromomolibdenovym splavom).

PERIODICAL:

"Svarochnoye Proizvodstvo", 1957, # 5, pp 18-19 (USSR).

ABSTRACT:

The article briefly reviews the available data and gives the results of the experimental work on this subject by the author's institute. Surfacing die blocks for hot and cold punch presses by electrodes "M -7" resulted in the following approximate composition of the facing metal: 2.33 % Cr, 0.24 % Mn, 0.57 % C, 0.18 % Si, 0.82 % Mo. The facing was always sound and the slag was easily removed. Some authors (1), (4), consider steel "45" as the best suitable material for die blanks. Experiments showed that this steel gives good results in production of twolayer cold punching dies, but is not permissible for hot dies because of insufficient hardness. Steel "40X" and rim steel make die blanks of higher hardness. Experience had shown that the previously practiced groove depth of 4-6 mm is insufficient, and with 8 mm deep grooves a die may be re-ground three or even

Surfacing Forging Dies with Chrome-Molybdenum Alloy. (Naplavka shtampov khromomolibdenovym splavom).

four times.

The article describes the most effective procedures for heat treatment.

The electrodes "W -7" are also applicable for surfacing the blades of guillotine shears, and fast-wearing machine tool parts.

The article lists 4 references, all Russian.
